

PILOT Supervisor

Central verification of inspection results

- central verification of inspection results from multiple inspection systems and production lines
- no extra workstations in the respective line necessary
- integration of inspection systems (AOI, AXI, SPI) from other manufacturers for fault display and statistical evaluation

PILOT Supervisor

Central inspection data management from different production lines

High efficiency

- significant cost savings through efficient system-wide and line-wide operation
- central management of information and results from the inspection process
- flexible assignment of responsibilities for inspection systems and production lines

Saving of resources

- verification of all results from one central workstation
- communication with conveyor for Pass/Fail control of the verified PCB
- no extra verification workstations (PC, software, licenses) after the inspection systems are necessary

PILOT VERIFY PILOT STATISTIC PILOT SUPERVISOR

All data in view

- import of all inspection results in a central database system (including third-party systems)
- secure fault classification through unique display of all inspection results
- central communication with MES and traceability systems
